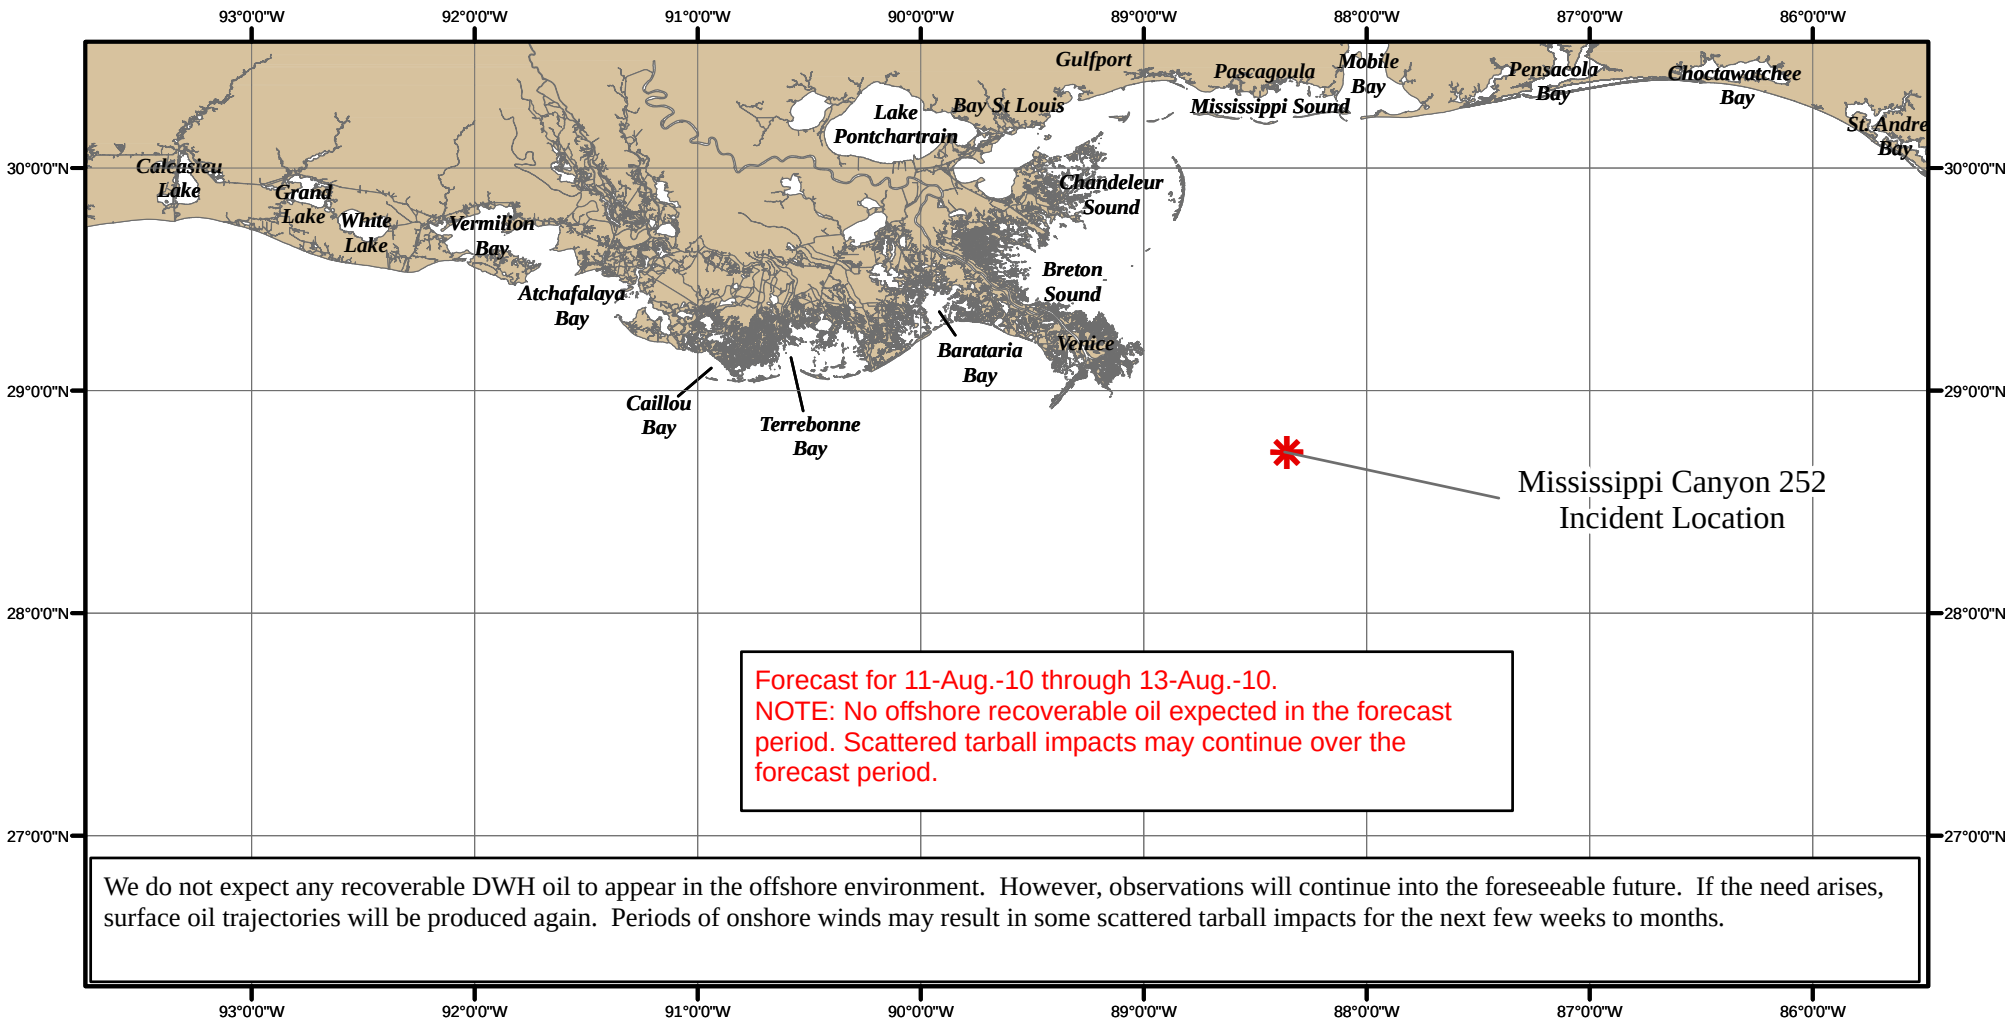
Nearshore
Surface Oil Forecast
Deepwater Horizon MC252

NOAA/NOS/OR&R **Nearshore**

Estimate for: 1200 CDT, 8/11/10 through 8/13/10
Date Prepared: 2000 CDT, Tuesday, 8/10/10

No recoverable oil has been reported by daily overflights since July 30. Daily satellite analyses have indicated a decreasing number of possible oil anomalies since the well has been capped. Recent overflights sent to investigate satellite anomalies have only reported seeing seaweed with an occasional colorless sheen.



Forecast for 11-Aug.-10 through 13-Aug.-10.
NOTE: No offshore recoverable oil expected in the forecast period. Scattered tarball impacts may continue over the forecast period.

We do not expect any recoverable DWH oil to appear in the offshore environment. However, observations will continue into the foreseeable future. If the need arises, surface oil trajectories will be produced again. Periods of onshore winds may result in some scattered tarball impacts for the next few weeks to months.
